**GASTRIC EPITHELIUM:** Epithelial cells of the gastric mucosa are the most common site of origin for gastric cancer. The normal gastric mucosa is composed of a simple columnar epithelium. The cells are arranged in a regular, orderly fashion, with the nuclei located near the base and the cytoplasm extending towards the lumen. The cells are connected by tight junctions, which prevent the passage of substances between them. The normal gastric mucosa is characterized by a regular, orderly arrangement of cells, with the nuclei located near the base and the cytoplasm extending towards the lumen. The cells are connected by tight junctions, which prevent the passage of substances between them. The normal gastric mucosa is characterized by a regular, orderly arrangement of cells, with the nuclei located near the base and the cytoplasm extending towards the lumen. The cells are connected by tight junctions, which prevent the passage of substances between them.
